

Lighthouse

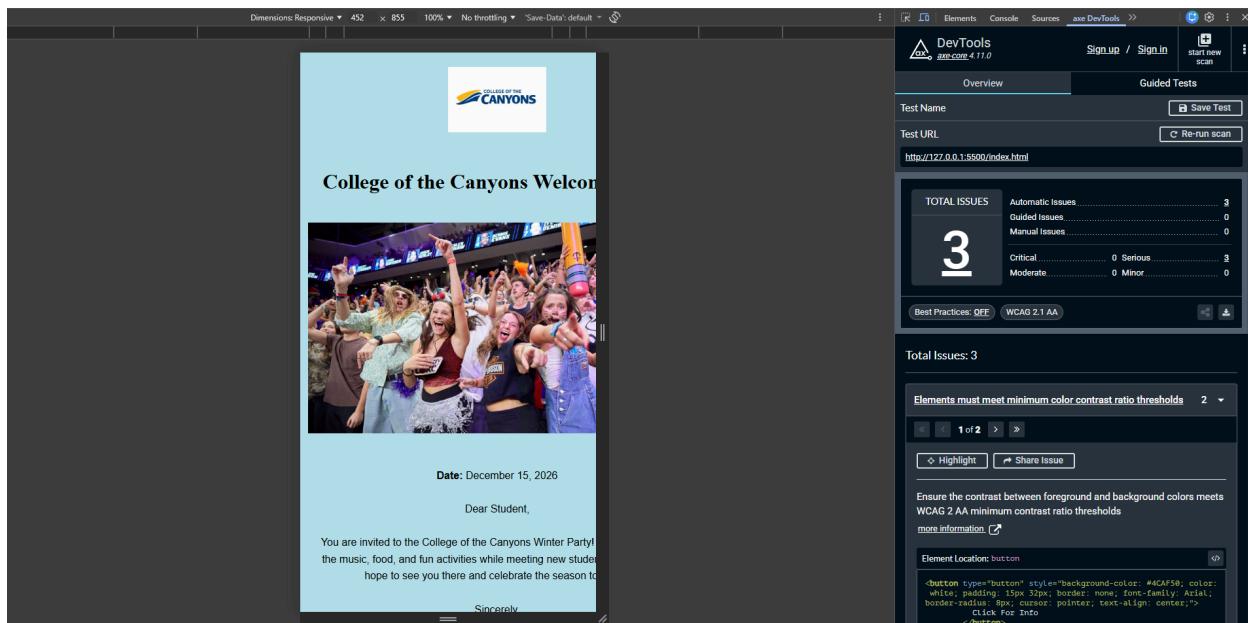

Pros ideas:

- Fast score + clear suggestions
- Shows specific issues to fix (ex: contrast, alt text, headings)

Cons ideas:

- Not perfect for email-only HTML (some tips are more for websites)
 - Doesn't catch every accessibility problem; still needs human checking
-

Axe DevTools

Pros

- Easy to use and fast.
- Tell you what is wrong on the page.
- Shows exactly where the problem is.
- Helps you fix things like contrast and missing labels.

Cons

- Some parts cost money.
- Some messages are confusing.
- It does not catch every accessibility problem.
- It can sometimes show warnings that are not a big deal.

Silktide

The screenshot shows the Silktide web application interface. On the left, there's a preview of a website for the 'College of the Canyons Welcome Event'. The page features the college's logo at the top, followed by a large photo of a cheering crowd. Below the photo, the text 'College of the Canyons Welcome Event' is displayed. A date 'December 15, 2026' is shown, along with a greeting 'Dear Student,' and an invitation message. At the bottom, there's a signature that reads 'Sincerely, College of the Canyons'. On the right side of the interface, a sidebar titled 'Accessibility checker' is open, showing results for 'Automated' checks against 'WCAG 2.1 AA' standards. Three issues are listed:

- Text contrast (WCAG 2.0 AA 14.3) - 2 issues
- Semantic links (WCAG 2.0 A 1.3.1) - 1 issue
- Missing title (WCAG 2.0 A 2.4.2) - 1 issue

Pros

- Easy to use and simple menu.
- Lets you check things like contrast, alt text, and headings.
- Shows accessibility problems clearly.
- Good for beginners.

Cons

- Not as detailed as Axe.
- Some features require a login or paid version.
- It can miss some problems.
- Sometimes it focuses more on website design than email HTML.
